Problem Statement

Students seeking financial assistance for higher education face difficulty finding suitable scholarships because information is scattered across multiple websites and portals. They must manually search different platforms and check varying eligibility criteria, which is time-consuming and inefficient. As a result, students may miss suitable scholarship opportunities and important application deadlines. Therefore, there is a need for a centralized and personalized system that simplifies scholarship discovery, eligibility checking, and recommendation.

Existing System & Limitations

Existing Sources

- Government Scholarship Portals
- State Scholarship Portals
- Private Scholarship Websites
- College/University Portals
- Search Engines

Limitations

- Scholarship information is scattered across multiple platforms.
- Students need to visit several websites.
- Eligibility checking is mostly manual.
- Difficult to compare multiple scholarships.
- Limited personalized recommendations.
- Students may miss important deadlines.
- No single platform provides a complete student-focused view.

Solution

Scholarship Navigator

- A smart platform that collects, processes and recommends scholarships according to a student's profile.

Key Functions:

- Aggregate scholarship information from multiple permitted/verified sources.
- Allow students to search and filter scholarships.
- Automatically check eligibility.
- Generate personalized scholarship recommendations.
- Provide comparison, document and deadline tracking.
- Redirect students to official application sources.

Core Features & Objectives

Core Features

- Multi-Source Scholarship Data Aggregation
- Student Profile Management
- Scholarship Search & Filtering
- AI-Based Recommendation
- Scholarship Comparison
- Deadline Notifications
- Official Application Redirect

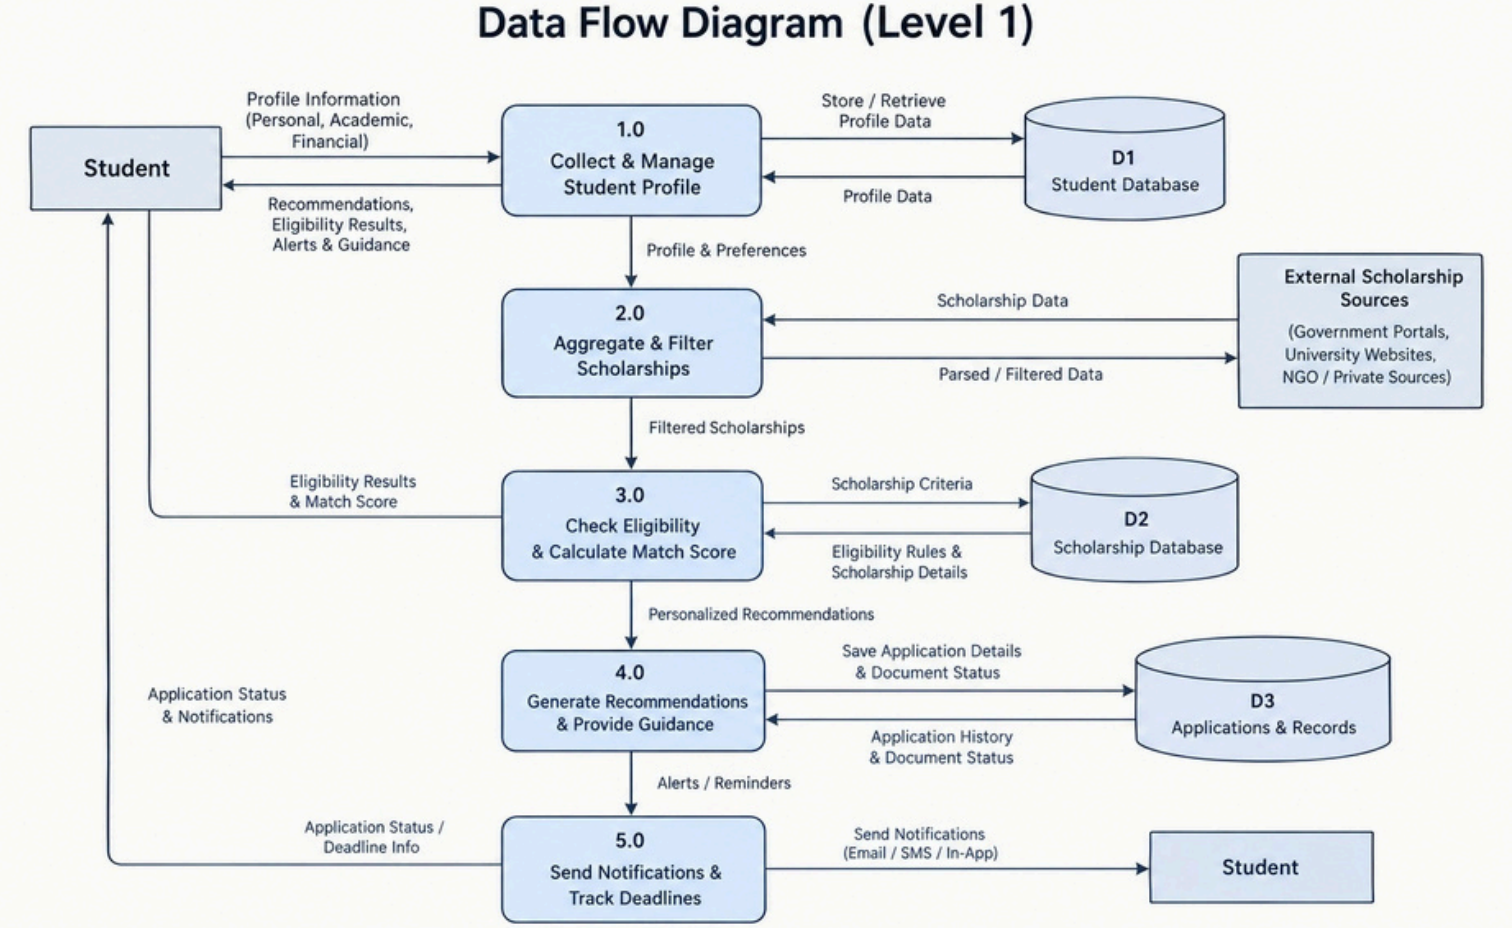

Objectives

- Centralize scholarship discovery.
- Reduce manual searching.
- Provide personalized recommendations.
- Automatically evaluate eligibility.
- Help students track applications and deadlines.

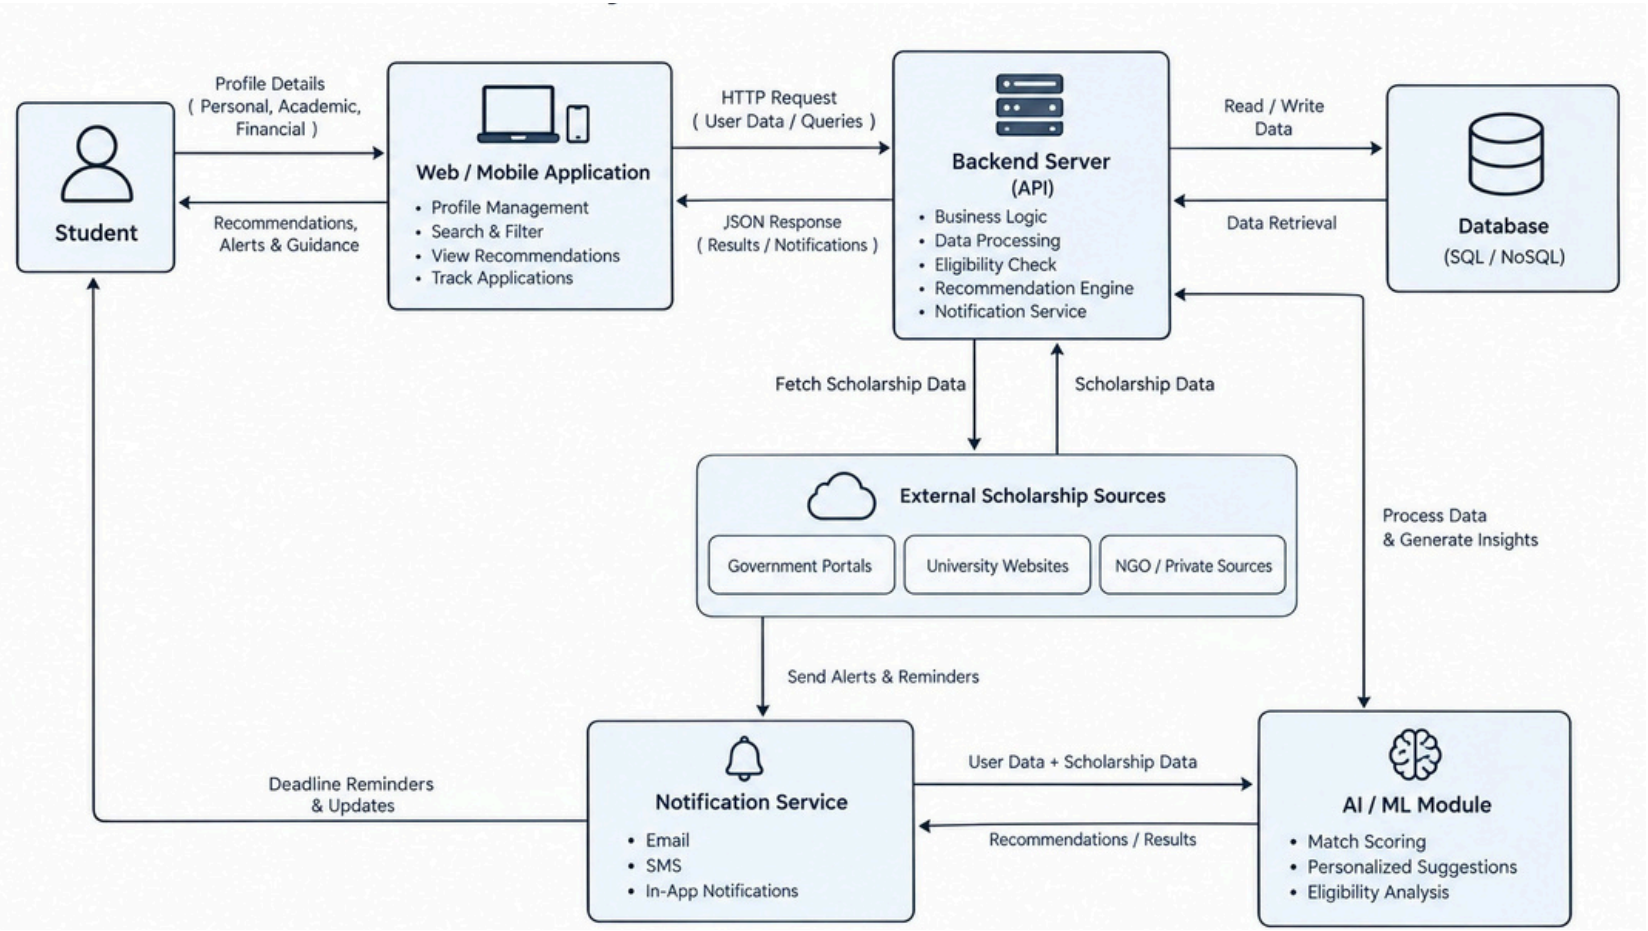

Technology Stack

- Frontend: React.js
- Backend: Python Flask
- Database: MongoDB
- AI/ML: Python, Scikit-learn
- Authentication: JWT
- Data Collection: APIs / Permitted Web Data
- Notifications: Email / Scheduler
- Version Control: Git & GitHub
